We give a survey of some of the aspects of weak L^p spaces in R^n and the topologies on them. We review the significant results of Hunt, Fefferman, Cwikel and Aleksandrov on the spaces of interest. Using the definition of Weak H^1 on the unit disc introduced by Aleksandrov and a subspace H_0^1 we discuss some inclusions and properties of a subspace of the dual of H_0^1 and some examples.
